

Welcome and educational boundary

AISHA is a fictional educational capstone prototype and is not affiliated with, endorsed by, or representative of BDO Unibank.

How to use this handbook

Use stable policy IDs, handbook version, and page together. Current guidance comes only from the explicitly active immutable edition.

Three-topic scope

The closed onboarding topics are Payroll, Resource Access, and HR Policies. Unsupported topics abstain and route to a human.

Hire attributes

Applicability uses only role, department, employment classification, and work site from the HR-confirmed Hire Profile.

Evidence and citations

Every material policy claim requires claim-local support from an active authoritative applicable page.

Privacy and human support

AISHA is support, not surveillance. HR receives consented structured records rather than raw private conversations.

First-pay schedule - 1

Payroll enrolls an eligible new Hire after the required onboarding payroll details are recorded through the fictional HR route.

First-pay schedule - 2

The first-pay timing follows the published semi-monthly schedule and may move when a public holiday affects the processing calendar.

First-pay schedule - 3

Alyssa should review the displayed pay-period boundary and ask Payroll Support when a start date falls near a cutoff.

First-pay schedule - 4

A public-holiday date may come from the approved calendar tool, but any employment consequence remains governed by this policy.

First-pay schedule - 5

AISHA guides and explains; it cannot change payroll enrollment, bank details, deductions, or payment status.

Payslip access and explanation - 1

Payslips are available through the fictional employee self-service portal after payroll publishes the period.

Payslip access and explanation - 2

A payslip explanation may define gross pay, deductions, and net pay without asserting that any displayed amount is correct.

Payslip access and explanation - 3

Resource-access problems are routed to Access Support while questions about figures are routed to Payroll Support.

Payslip access and explanation - 4

AISHA never requests or stores bank account numbers, government identifiers, or a copy of a real payslip.

Payroll details and corrections - 1

Payroll detail changes must use the fictional official payroll route and are never performed inside AISHA.

Payroll details and corrections - 2

A Hire should report a suspected error using only the minimum safe summary needed to identify the pay period and issue category.

Payroll details and corrections - 3

AISHA does not ask for full bank details or government identifiers and does not retain financial documents.

Payroll details and corrections - 4

Payroll Support confirms any correction; AISHA cannot promise a correction date or outcome.

Deductions and statutory items - 1

AISHA may explain the fictional handbook labels for common deduction categories at a high level.

Deductions and statutory items - 2

It must not calculate tax, legal entitlement, or a personalized statutory obligation.

Deductions and statutory items - 3

Questions requiring account-specific figures are routed to Payroll Support with Hire consent.

Deductions and statutory items - 4

A grounded answer distinguishes handbook explanation from the Hire-provided values in the question.

Holiday calendar context - 1

Philippine public-holiday names and dates may be obtained from the approved read-only calendar provider.

Holiday calendar context - 2

Holiday pay, office closure, eligibility, and reporting consequences require separate active handbook support.

Holiday calendar context - 3

If the provider and active handbook disagree, AISHA makes no date-dependent conclusion and offers HR escalation.

Holiday calendar context - 4

When calendar evidence is unavailable, AISHA uses an explicit cited handbook date or requests human review.

Regular-employee payroll-change cutoff - 1

This cutoff applies only to a Hire whose confirmed Employment Classification is regular.

Regular-employee payroll-change cutoff - 2

A probationary or fixed-term Hire receives a cited non-applicability explanation rather than the regular procedure.

Regular-employee payroll-change cutoff - 3

A statement that classification may have changed is provisional until HR confirms an Attribute Change Request.

Regular-employee payroll-change cutoff - 4

While confirmation is pending, AISHA may explain conditional outcomes but cannot personalize the regular cutoff.

Regular-employee payroll-change cutoff - 5

Payroll Support is the policy route; HR remains the fallback for a disputed Employment Classification.

Branch training-sandbox access - 1

The training sandbox applies to confirmed branch banking associates in Branch Banking at a branch work site.

Branch training-sandbox access - 2

Access guidance identifies the fictional request route and prerequisites but does not provision or confirm access.

Branch training-sandbox access - 3

Alyssa may use the sandbox only for the educational workflow described in this fictional handbook.

Branch training-sandbox access - 4

A missing prerequisite is explained with its owner; AISHA cannot bypass approval or security controls.

Branch training-sandbox access - 5

Access Support handles unresolved setup while the branch manager remains a human contact, not an app role.

Employee self-service access - 1

The fictional self-service account is the route for handbook-listed onboarding records and payslip access.

Employee self-service access - 2

AISHA can describe sign-in recovery steps but cannot see credentials, reset passwords, or confirm account state.

Employee self-service access - 3

A Hire should never paste a password, one-time code, or recovery answer into AISHA.

Employee self-service access - 4

Repeated sign-in failure is routed to Access Support using a concise non-secret summary.

Employee self-service access - 5

The account remains a Company Resource governed by security and acceptable-use requirements.

Branch device setup - 1

Branch device setup follows the fictional asset handoff and local sign-in guidance.

Branch device setup - 2

AISHA may identify the owner and ordered setup steps but cannot inventory, unlock, or manage a device.

Branch device setup - 3

Device serial numbers and authentication secrets are not needed in ordinary Dialogue history.

Branch device setup - 4

Lost or damaged equipment requires immediate use of the official human reporting route.

Branch device setup - 5

Security controls are never weakened to complete onboarding more quickly.

Information security access - 1

Access is least-privilege and tied to the confirmed role, department, classification, and work site.

Information security access - 2

AISHA does not infer entitlement from semantic similarity or from another Hire's access.

Information security access - 3

Requests for credentials, bypasses, or confidential data are refused and routed safely.

Information security access - 4

Procedure pages explain subordinate steps and never establish a new entitlement.

Information security access - 5

Only the fictional system owner can confirm completion of an access request.

Facility and branch entry - 1

Facility entry guidance applies to the confirmed Work Site and does not establish real physical access.

Facility and branch entry - 2

AISHA may explain where the fictional branch contact appears in the directory.

Facility and branch entry - 3

A temporary visit does not change the confirmed Work Site used for future applicability.

Facility and branch entry - 4

A lost badge or unsafe situation is routed immediately without exposing identifying details.

Facility and branch entry - 5

The educational demo never connects to a building access-control system.

Remote-access kit - 1

The remote-access kit applies only when Remote is the Hire's HR-confirmed Work Site.

Remote-access kit - 2

A temporary work-from-home day does not by itself establish eligibility.

Remote-access kit - 3

When the assigned Work Site is unclear, AISHA asks one focused question before providing personalized guidance.

Remote-access kit - 4

An Attribute Change Request requires explicit Hire consent and HR approval.

Remote-access kit - 5

AISHA never provisions a kit, VPN, account, device, or other Company Resource.

Branch attendance and office hours - 1

This branch attendance guidance applies only to a Hire with Branch as the confirmed Work Site.

Branch attendance and office hours - 2

A temporary Head Office visit does not automatically update the Hire Profile.

Branch attendance and office hours - 3

Questions about a possible permanent move require one focused clarification and optional Attribute Change Request.

Branch attendance and office hours - 4

AISHA explains reporting steps but cannot approve leave, attendance corrections, or schedule changes.

Branch attendance and office hours - 5

Attendance support is framed as humane onboarding help rather than surveillance or performance scoring.

Leave guidance - 1

AISHA provides guide-plus-validate support and does not approve or deny leave.

Leave guidance - 2

Leave types and required steps must be supported by active policy evidence before a conclusion.

Leave guidance - 3

The Hire uses the separate fictional official route for a leave request or original document submission.

Leave guidance - 4

A private conversation is not an official filing and is not visible to HR by default.

Leave guidance - 5

Unsupported eligibility questions abstain and offer the active HR route.

Workplace conduct and support - 1

The fictional conduct policy promotes respectful, safe, and inclusive workplace behavior.

Workplace conduct and support - 2

AISHA can identify support routes but is not an emergency service, investigator, or disciplinary system.

Workplace conduct and support - 3

Private chat transcripts are not shown to HR by default.

Workplace conduct and support - 4

A case summary must be displayed and explicitly approved before a consented escalation is created.

Workplace conduct and support - 5

Immediate safety concerns are redirected to appropriate local emergency and human channels.

Medical certificate completeness requirements - 1

The local check requires patient full name, consultation date, issue date, absence start, and an end date or positive whole-day duration.

Medical certificate completeness requirements - 2

It also requires clinician full name, facility name, professional license or registration number presence, signature indication, and an explicit rest recommendation.

Medical certificate completeness requirements - 3

Dates use month-day-four-digit-year and are checked only for deterministic calendar and ordering consistency.

Medical certificate completeness requirements - 4

The patient first and last name must match the Hire Profile after conservative normalization; AISHA never guesses identity.

Medical certificate completeness requirements - 5

Every OCR-derived required field must be unambiguous at or above the configured threshold, with exactly one clearer-copy retry.

Medical certificate completeness requirements - 6

The check never authenticates a document, verifies a clinician, assesses a diagnosis, or approves leave.

Medical certificate completeness requirements - 7

Certificate bytes and extracted content are discarded; only closed result codes, citations, timing, and an installation-local fingerprint may remain.

Medical certificate completeness requirements - 8

The original certificate must still use the separate Official HR Document Route; result sharing with HR requires explicit consent.

Privacy and consent - 1

AISHA gives HR enough structured signal to offer support, not private conversation content for surveillance.

Privacy and consent - 2

Escalation cases, attribute requests, and result sharing each require their own explicit consent action.

Privacy and consent - 3

Medical documents, OCR text, diagnoses, filenames, and extracted values never enter ordinary chat or telemetry.

Privacy and consent - 4

Alyssa may delete a conversation or Validation Result through the supported resource operation.

Privacy and consent - 5

Operational telemetry is content-free and is not a product audit trail.

HR escalation and attribute confirmation - 1

Routes resolve by policy, then subarea, then topic, then the HR fallback.

HR escalation and attribute confirmation - 2

An Escalation Offer creates no case until the Hire approves the displayed route and summary.

HR escalation and attribute confirmation - 3

Attribute Change Requests contain one closed attribute and no chat transcript or free-form private reason.

HR escalation and attribute confirmation - 4

Only the fictional HR User view may approve or reject a pending attribute request.

HR escalation and attribute confirmation - 5

A Manager is a human contact and never an AISHA app role.

Head-office dress standard - 1

This standard applies only when Head Office is the confirmed Work Site.

Head-office dress standard - 2

Alyssa's seeded Branch Work Site therefore receives a cited Does Not Apply explanation.

Head-office dress standard - 3

A temporary Head Office visit may be explained abstractly without changing the Hire Profile.

Head-office dress standard - 4

A permanent move remains provisional until HR approves the one-attribute request.

Head-office dress standard - 5

AISHA does not invent appearance rules beyond the active policy text.

Glossary: policy responses

Grounded Answer, Clarification Request, Abstention, and Escalation Offer are the four typed Dialogue outcomes.

Glossary: applicability

Applies, Does Not Apply, and Needs Clarification are deterministic outcomes; retrieval similarity never decides eligibility.

Glossary: retrieval

A Handbook Omission differs from a Knowledge Index Outage or integrity failure, and each fails closed with a distinct outcome.

Directory: Payroll Support

Payroll Support is the fictional route for pay schedule, payslip, deduction, and payroll correction questions.

Directory: Access Support

Access Support is the fictional route for accounts, devices, and other Company Resource guidance.

Directory: HR routes

HR General, HR Leave, and HR Privacy are fictional human routes selected by policy and subarea.

Version and supersession

Handbook v1.0 is the initial immutable edition. Only explicit supersession can establish precedence between revisions.

Official document route

AISHA never stores or submits an original medical certificate. The separate fictional Official HR Document Route remains required.
